## LIGHT REFELECTION VALUES

Light Reflectance Value (LRV) is the total quantity of visible and useable light reflected by a surface in all directions and at all wavelengths when illuminated by a light source.
LRV is a measurement that tells you how much light a colour reflects, and conversely how much it absorbs. LRV runs on a scale from 0% to 100%. Zero assumed to be an absolute black and 100% being an assumed perfectly reflective white.
LRV at Pergo is measured by a CIElab spectrophotometer set within a XYZ-Tristimulis system. In this test the Y-vector is determined by a colour measuring device. The device used for this measurement is a Minolta CR410 with a measuring lens of 50mm.
